The **University Of Azad Jammu and Kashmir, Muzaffarabad**

Department of Software Engineering

Student Name	**Muhamad Zain Mughal**
Roll Number	**2025-SE-03**
Course Title	**Operating Systems**
Course Code	**CSC – 533**
Course Instructor	**Engr. Seemab Khurshid**
Semester	**3rd**
Session	**2025–29**
Lab No	**02**
Lab Title	**Windows 10 Installation and Customization**
Date	**23-Oct-2026**

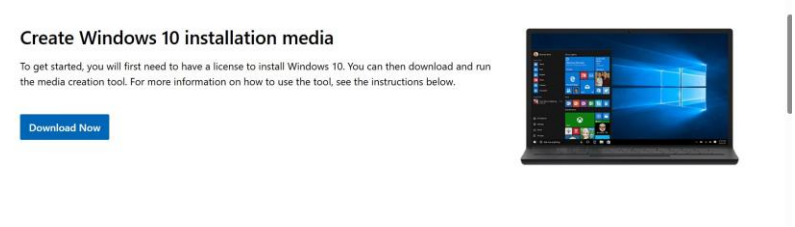

1. Objective

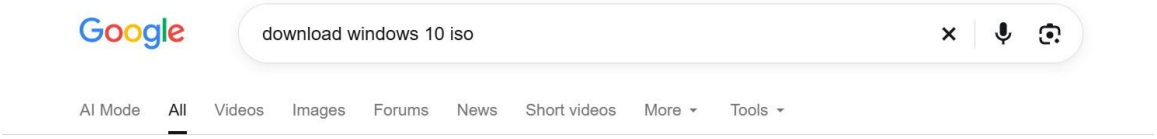

To document the step-by-step installation of Windows 10 using a bootable USB and customize desktop appearance, taskbar, Start menu, display, notification, privacy, and accessibility settings.

1. Windows 10 Installation

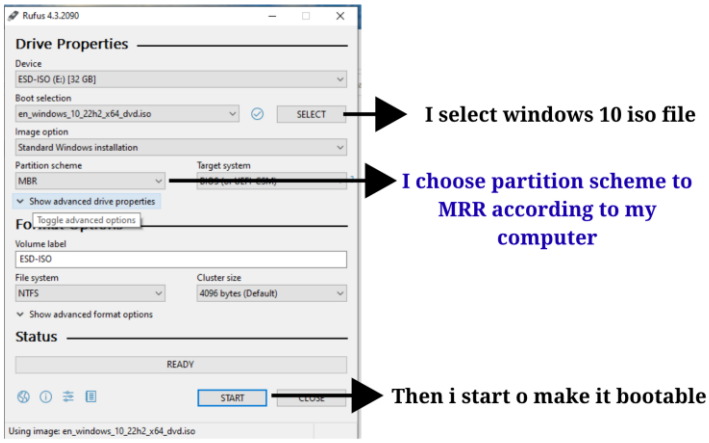

Requirements

First of all I must have a bootable USB to install windows 10 so I get a 32gb USB (meanwhile we can use 8gb USB also), then I download the windows 10 official ISO from Microsoft official website and make USB bootable by using rufus.

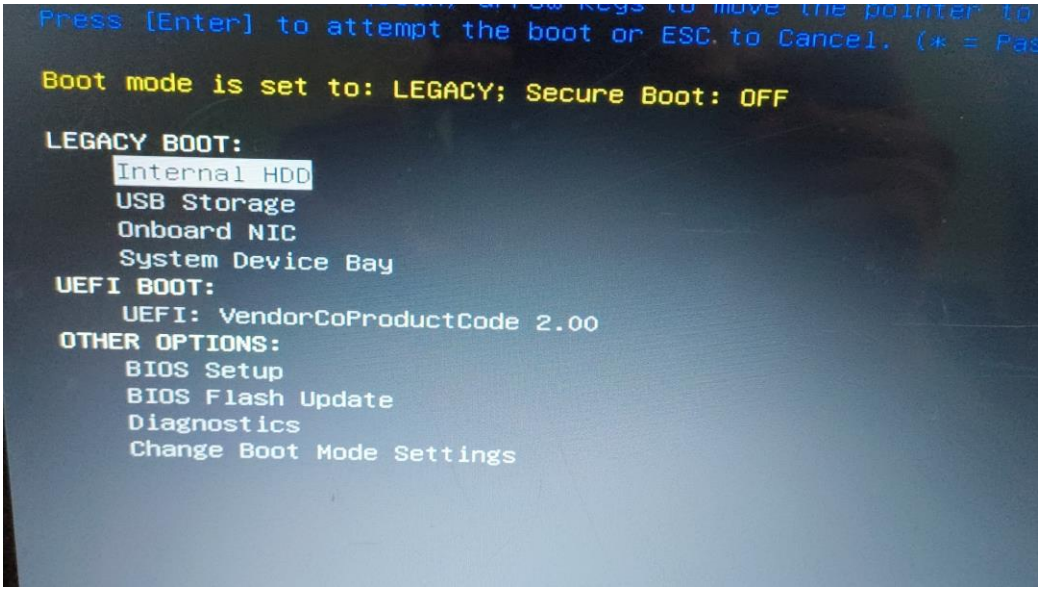

Installation — Step by Step

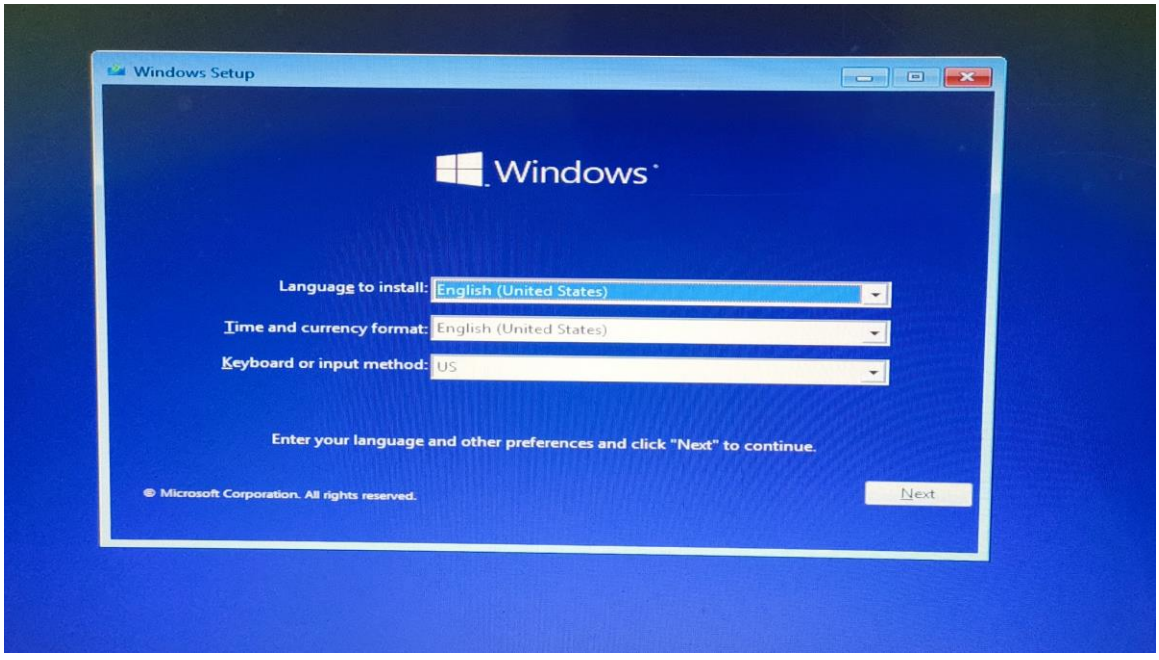

Step 1: Boot the Computer from the USB

First, I restart the computer and open the boot menu. I select the USB Storage option to start the Windows installation from the bootable USB. The screen shows Legacy Boot selected and Secure Boot turned off.

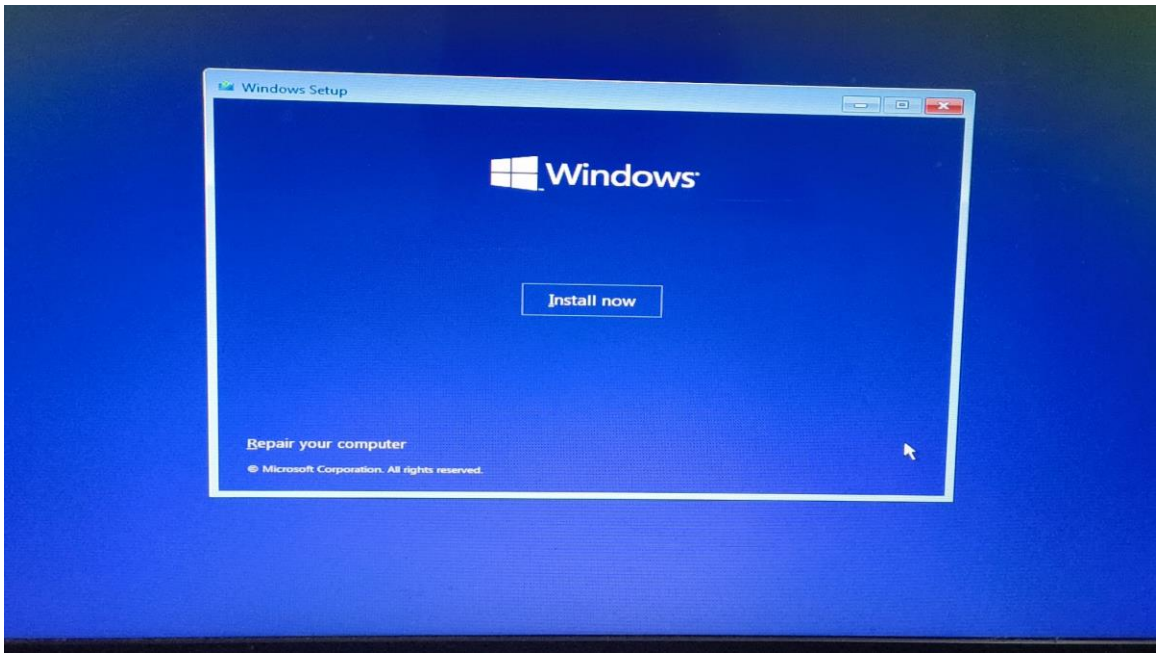

Step 2: Select Language and Preferences

I select the language to install, the time and currency format, and the keyboard or input method. Then, I click Next to continue.

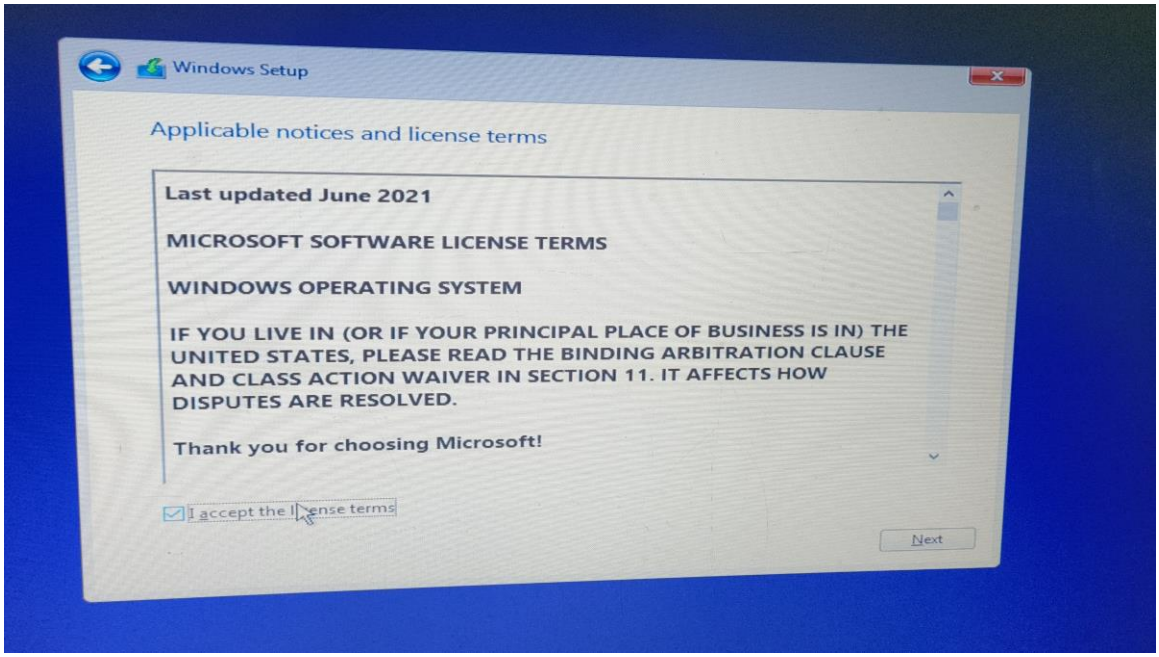

Step 3: Start the Installation

I click Install now to begin the Windows installation process.

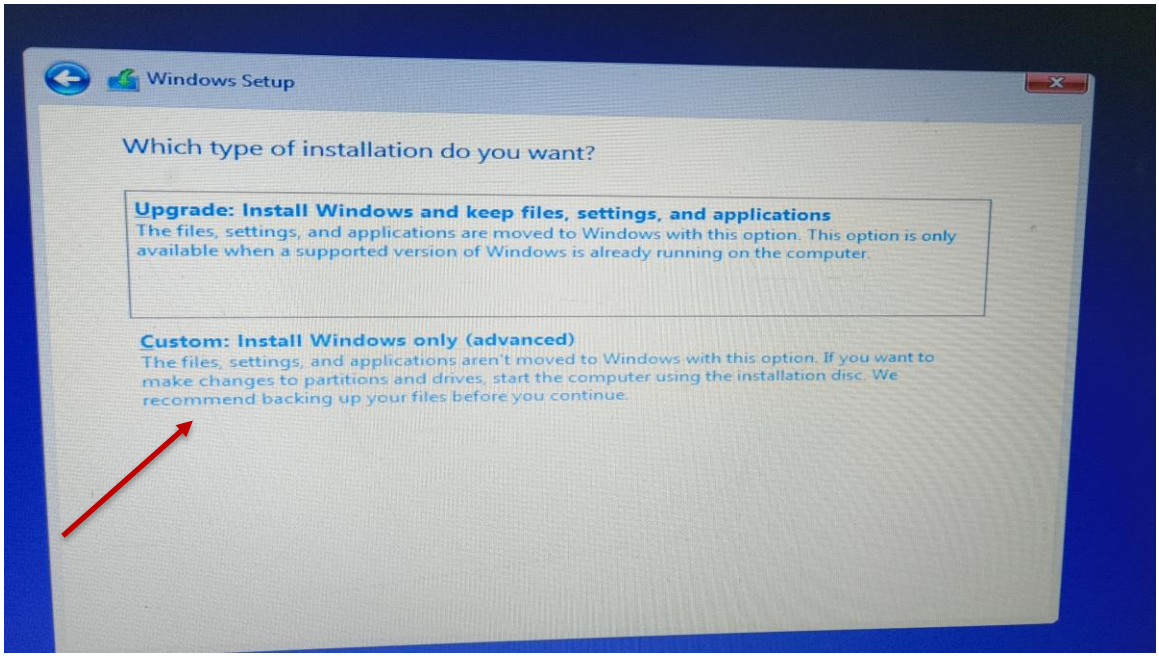

Step 4: Accept the License Terms

I read the Microsoft Software License Terms, select the checkbox to accept them, and click Next.

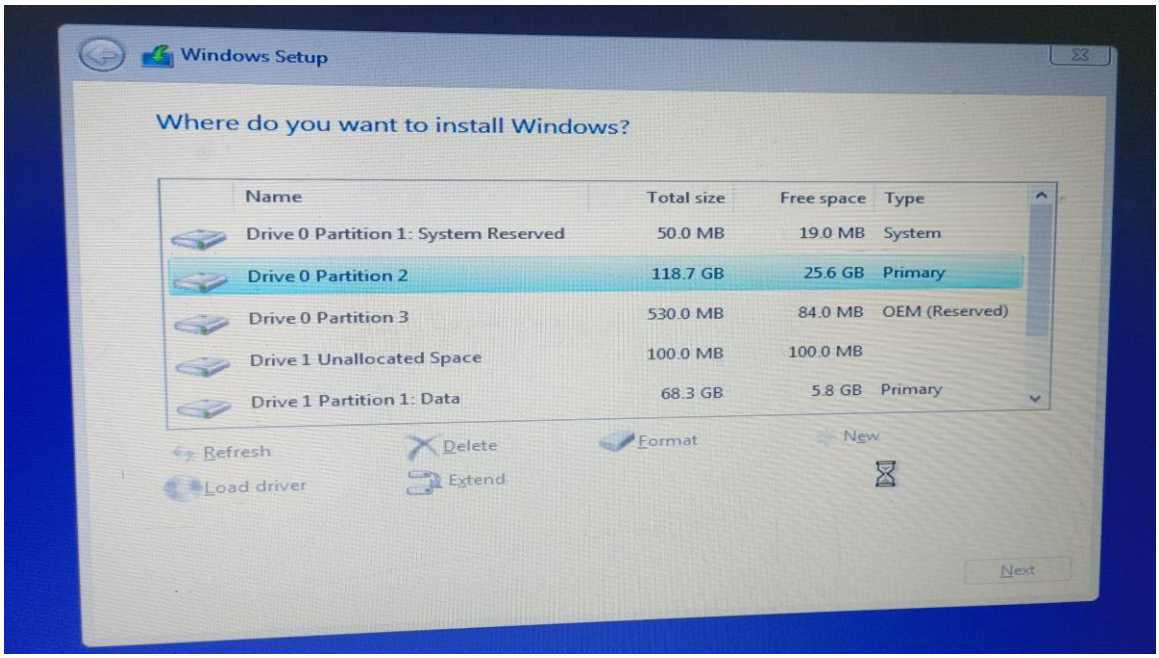

Step 5: Select the Installation Type

I select Custom: Install Windows only (advanced) for a clean installation. This option does not keep existing files, settings, and applications, so I make sure important files are backed up before continuing.

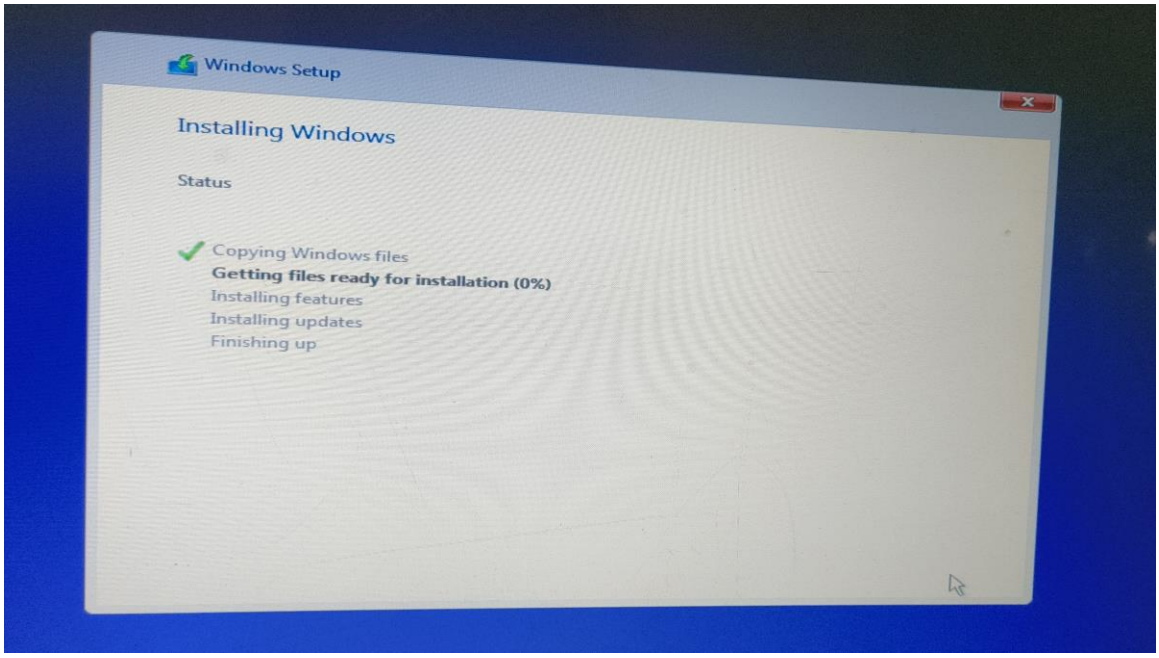

Step 6: Select the Windows Installation Partition

I review the available drives and partitions and identify the partition intended for Windows. I check the drive size and free space before proceeding. I do not format or delete any partition unless I have confirmed it is the correct target.

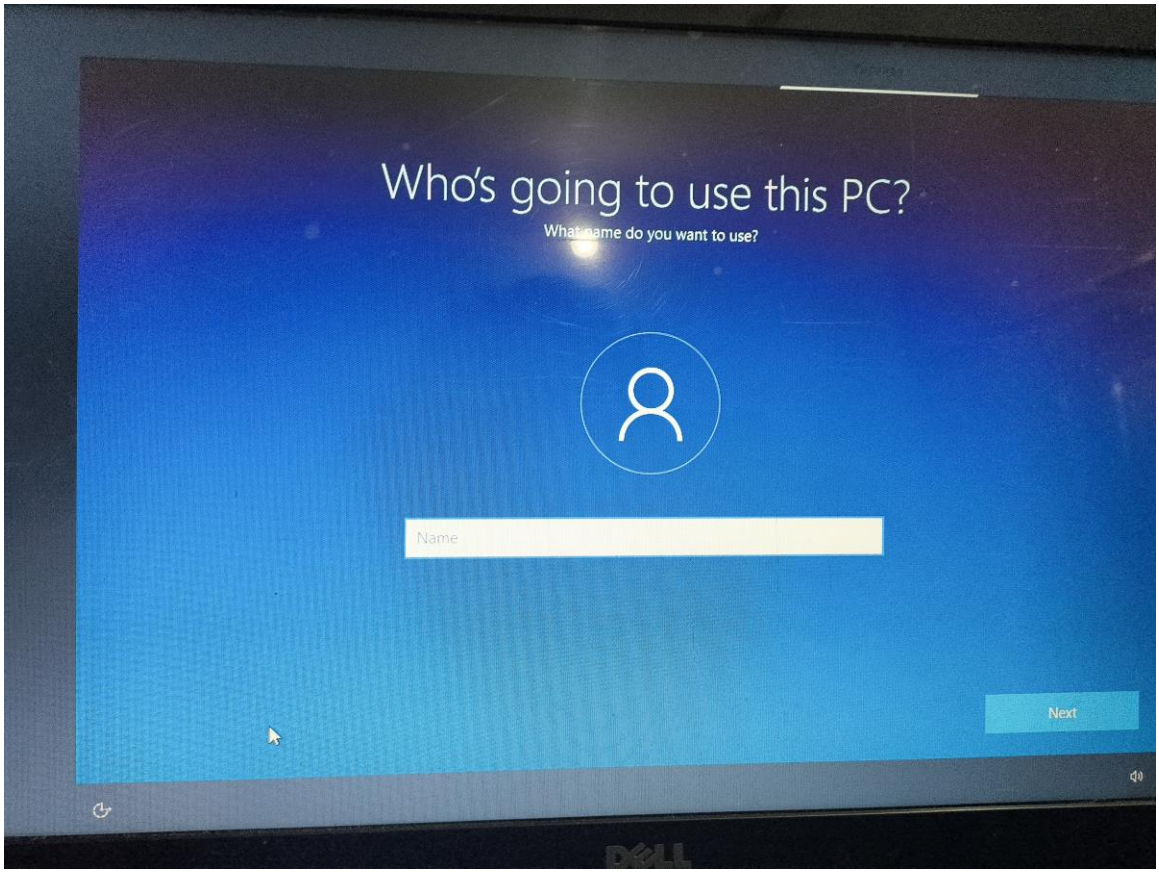

Step 7: Wait for Windows to Install

I wait while Windows copies files, gets files ready for installation, installs features and updates, and finishes the setup process.

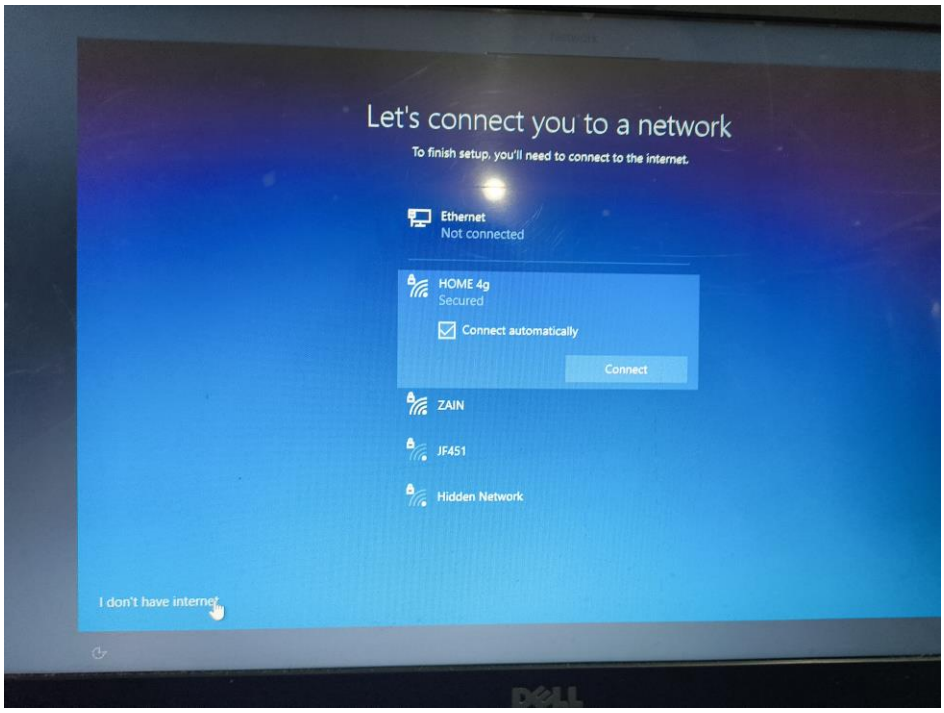

Step 8: Enter the User Name

I enter my name ZAIN I want to use for the PC account and click Next.

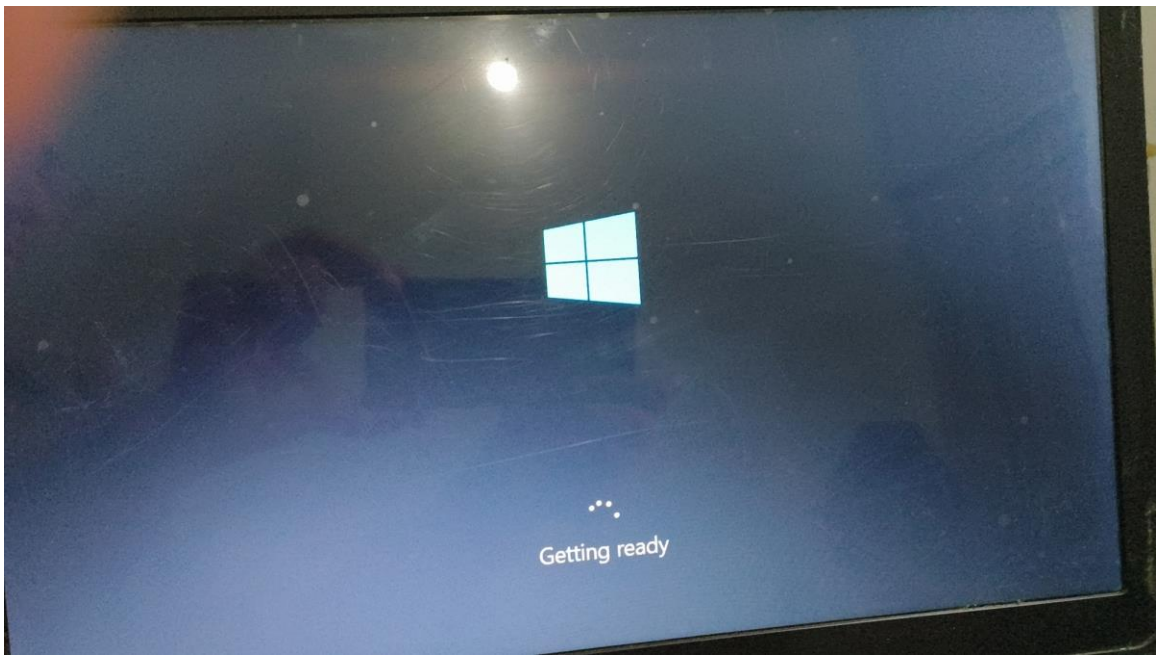

Step 9: Connect to a Network

I use the offline option and skip the internet access.

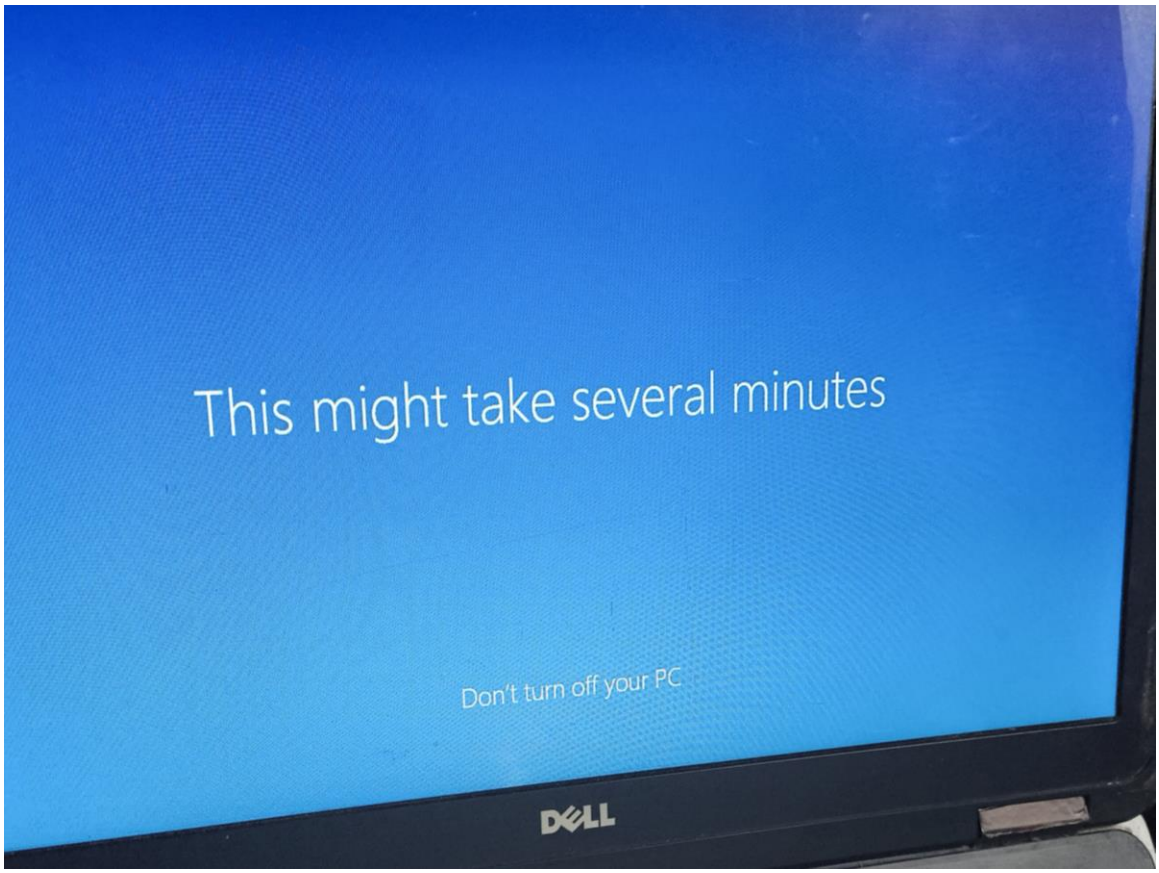

Step 10: Wait While Windows Gets Ready

I wait while Windows completes the initial configuration. I do not turn off the computer during this process.

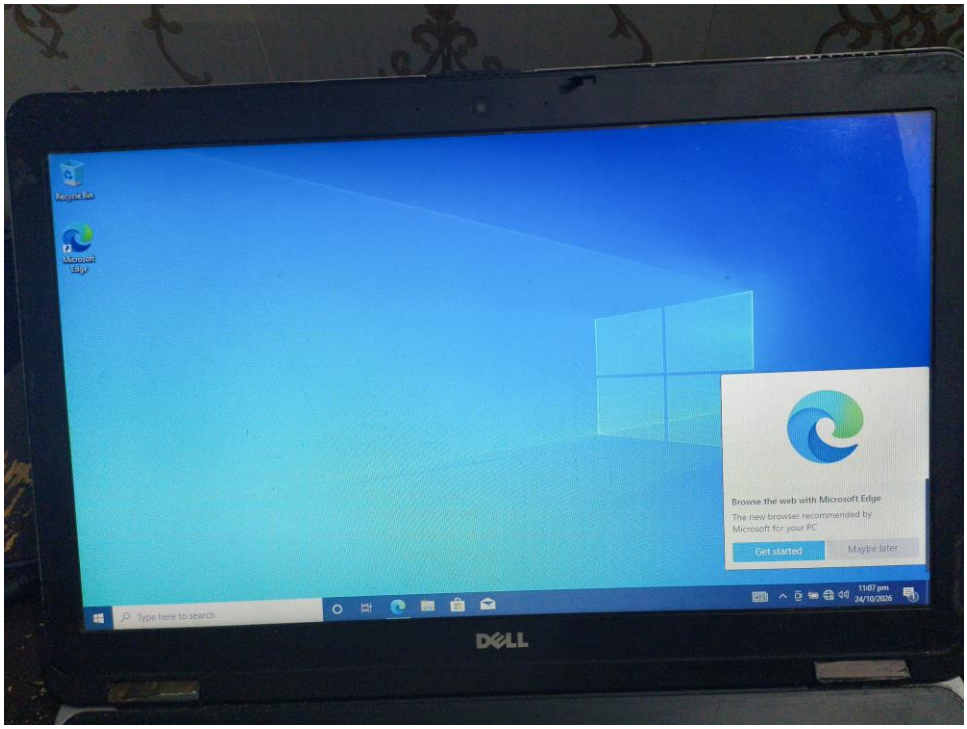

Step 11: Wait for Windows to Start

I wait for Windows to finish starting while the Windows logo and loading indicator are displayed.

Step 12: Check the Windows Desktop

I check that the Windows desktop appears. The desktop includes the Recycle Bin, Microsoft Edge, taskbar, and system tray.

Precautions

- I back up important files before starting a clean installation.
- I check the drive and partition details carefully because formatting or deleting the wrong partition can erase data.
- I do not turn off the computer while Windows is installing or getting ready.
- I use a valid Windows license to activate the installation.

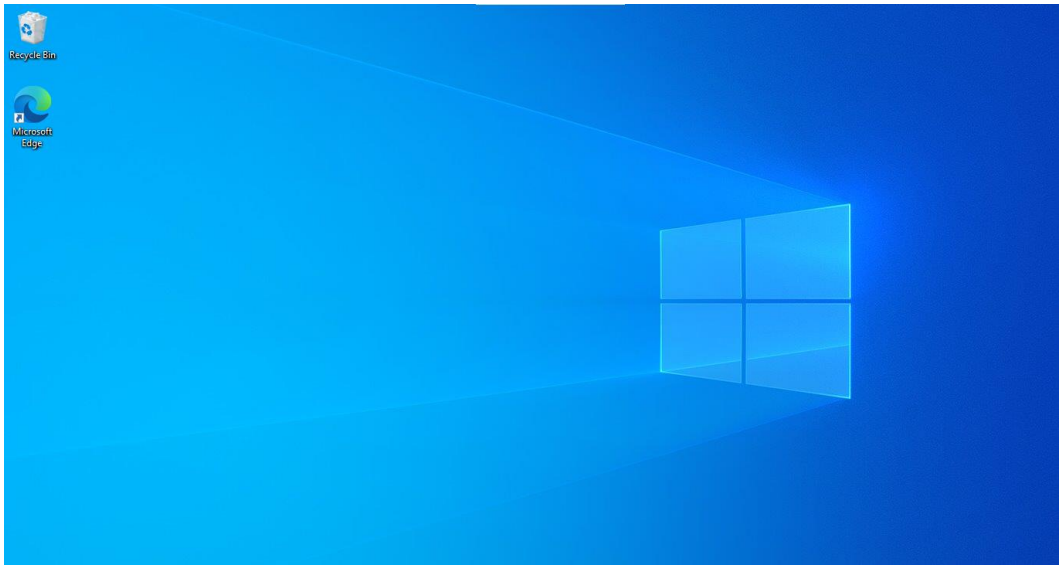

2.---Customization

Objective

To customize the Windows desktop, taskbar and Start menu, adjust display settings, configure notifications and privacy, and demonstrate at least two accessibility features.

Task 1: Apply a Consistent Desktop Theme and Background

Before

1. I right-click an empty area of the desktop and select Personalize.

2. I open Background and choose Picture.

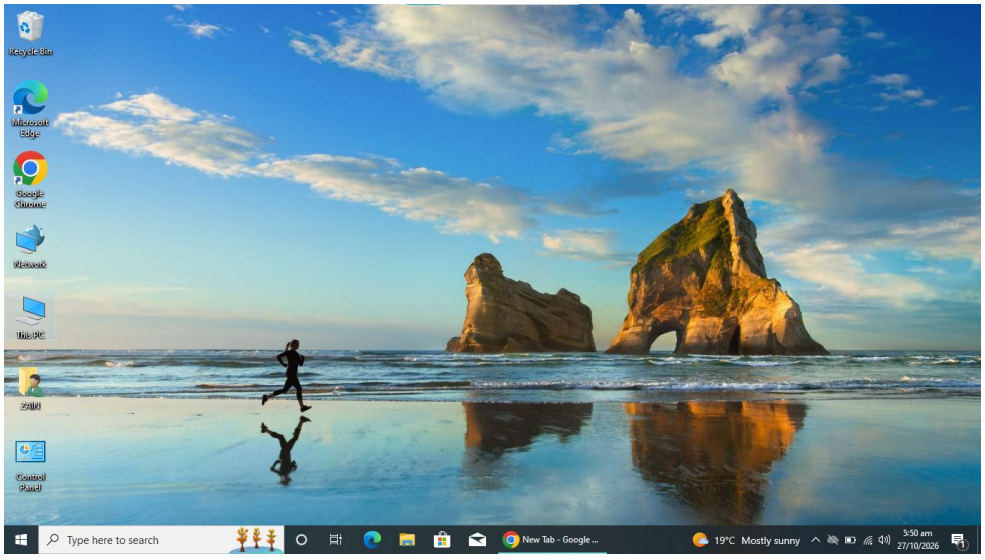

3. If I choose Picture, I click Browse and select a suitable image.

4. I choose an appropriate fit option.

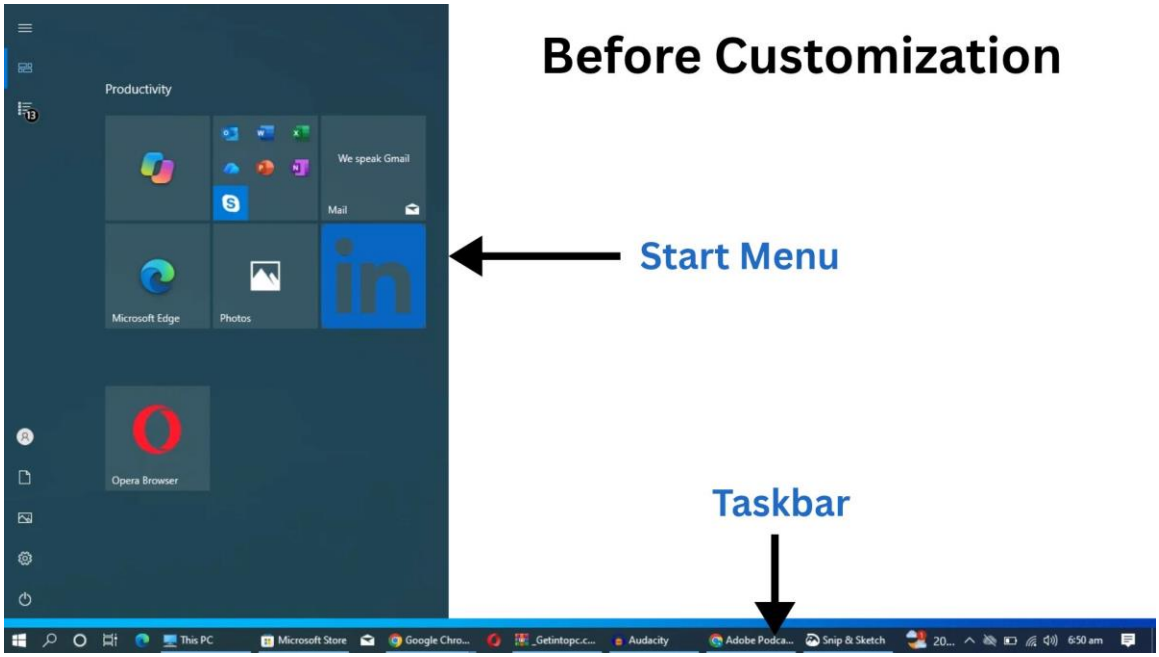

5. I open Themes and select a theme that matches the background.

6. I check the desktop to confirm that the changes have been applied.

After

Task 2: Customize the Taskbar and Start Menu

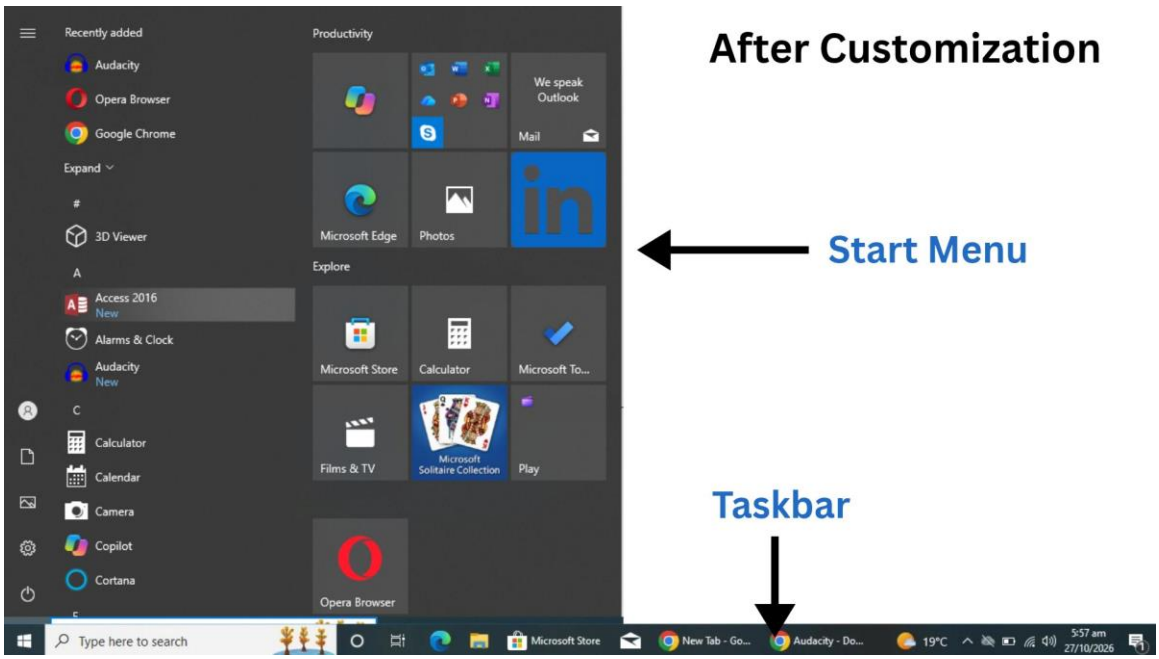

1. I right-click the taskbar and select Taskbar settings.

2. I review the available taskbar options and make suitable changes.

3. I open Start > Settings > Personalization > Start.

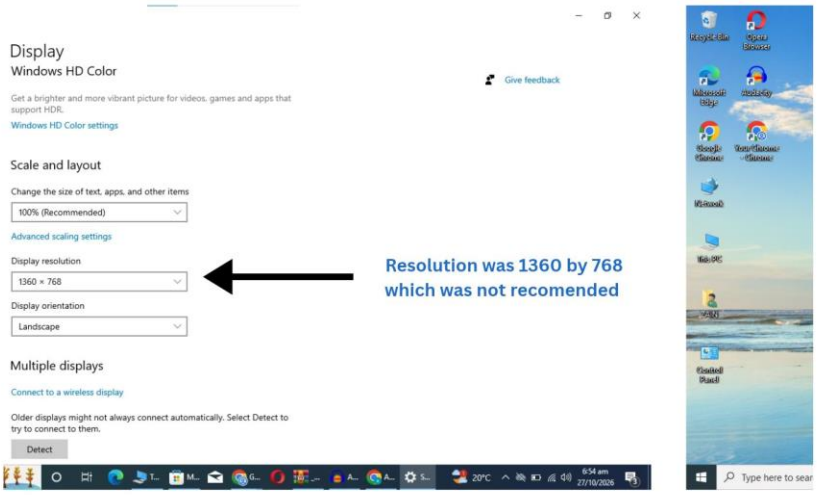

4. I review the Start menu options and choose settings that make it easier to use.

5. I open the Start menu and check that the changes have been applied.

Task 3: Adjust Display Settings

Before Customization

1. I right-click the desktop and select Display settings.

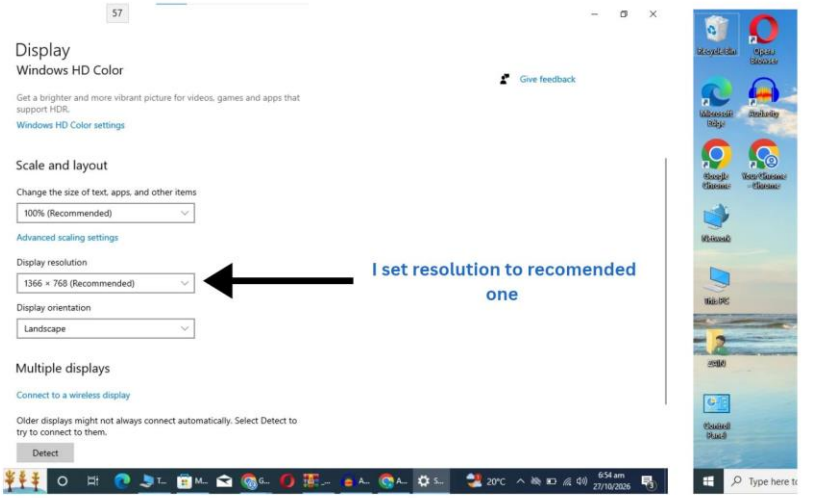

2. Under Scale and layout, I check the resolution and select the recommended resolution when available.

3. I adjust text and app scaling if items are too small or too large.

4. I review Night light and configure it if needed.

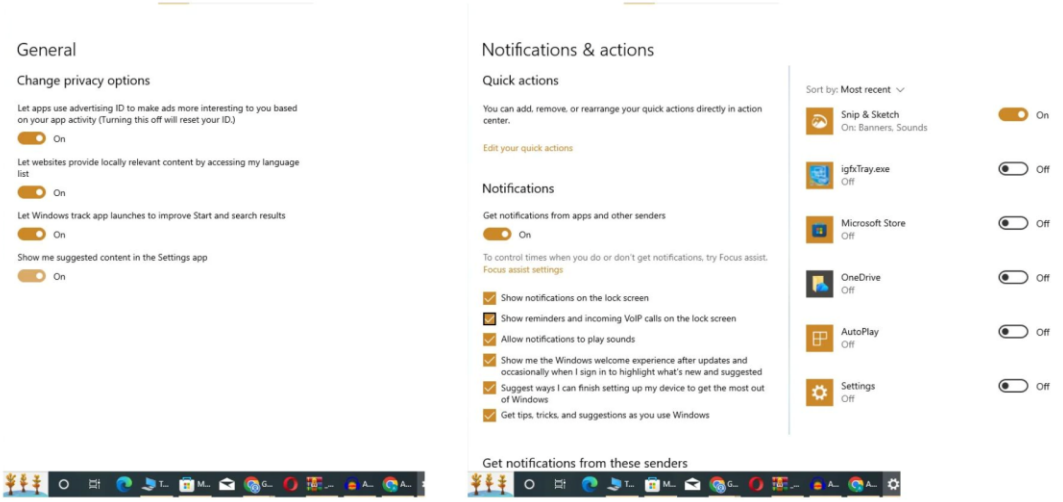

5. I check that text and icons are comfortable to view.

After Customization

Task 4: Configure Notifications and Privacy Settings

Before Customization

All options were tick some of them were not useful, also only 1 app was given permission for notifications

1. I open Start > Settings > System > Notifications & actions.

2. I review notifications and turn off unnecessary app notifications where appropriate.

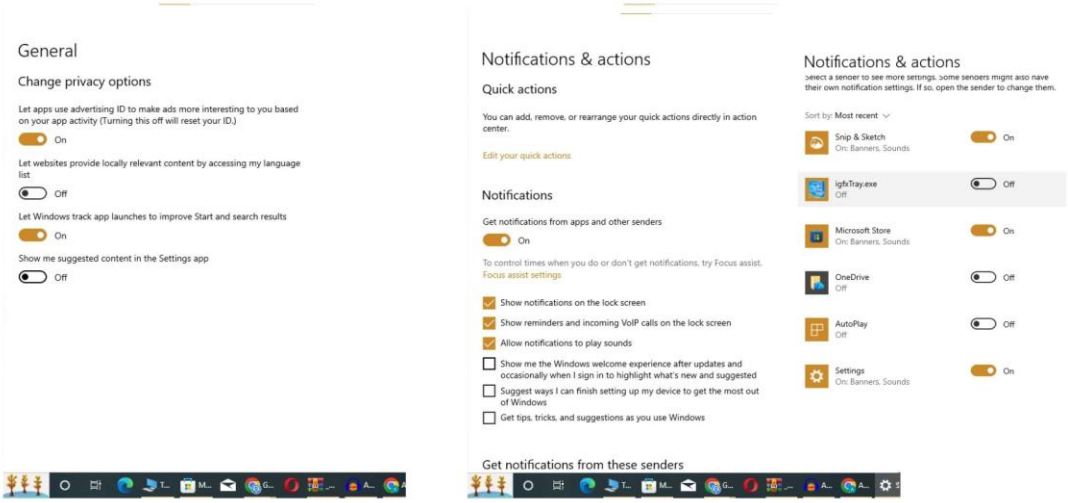

3. I keep important security and system notifications enabled.

4. I open Start > Settings > Privacy.

5. I review permissions such as location, camera, and microphone.

6. I allow access only for apps that need it and turn off unnecessary permissions where appropriate.

After Customization

I keep on the important settings only adn turn off others, and also give notification permission to some other apps also

Task 5: Demonstrate Two Accessibility Features

Feature 1: Magnifier

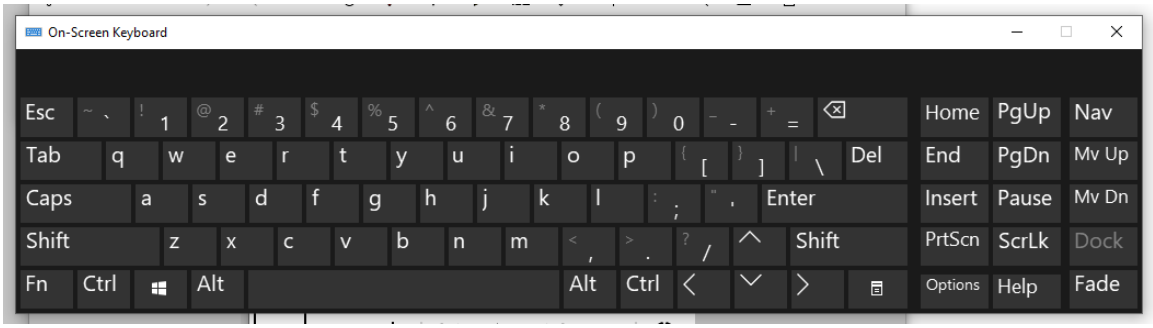

1. I press Windows key + Plus (+) to open Magnifier.

2. I press Windows key + Plus (+) to zoom in and Windows key + Minus (-) to zoom out.

3. I observe how Magnifier enlarges screen content, then close it.

Screenshot evidence: [Insert a screenshot showing Magnifier in use.]

Feature 2: On-Screen Keyboard

1. I press Windows key + Ctrl + O, or open Settings > Ease of Access > Keyboard.

2. I turn on the On-Screen Keyboard.

3. I click its keys with the mouse to enter text, then close it.

Screenshot evidence: [Insert a screenshot showing the On-Screen Keyboard.]

Result

First of all I installed windows 19 then I customized the desktop appearance, reviewed taskbar and Start menu options, adjusted display settings, configured notification and privacy options, and tested Magnifier and the On-Screen Keyboard. I will attach genuine screenshots from my computer as evidence.

Conclusion

This practical helped me learn how to install and personalize Windows 10, improve viewing comfort, control notifications and application permissions, and use accessibility tools to interact with the computer.
